

Software Engineering 2020

Homework 5

Review for TripSage

Observations :

- The Views.py file contains three main functionalities
 - `get_response(request)` - Performs the majority of the work and complete logic is present in this function
 - `results_page(request)` - Returns results of the users requested problem
 - `index(request)` - HomePage
- There are three HTML Pages
- Have used Django, SQLite3, Python, HTML, CSS and JavaScript
- Did not see any separate functional testing codes
- Nice Software Documentation Page with Workflow provided
- Comments not present in the code
- 8 Issues provided by the previous team
- Multiple issues based on Logic Based while few of them are UI Based
- Database Check need to be considered as they have requested for adding a primary key as email
- Relationships of Tables need to be inspected once more
- Need to discuss with the team to assign new issues that can be created with respect to the project
- Need to explore more about the applications of the Project and its uses
- JavaScript familiarity needed
- Branching of the original project present and used
